What this report lays out

- Source instrument: CGI-I
- Item count: 1 item
- Response format: 7 options
- Respondent: Clinician

CLINICIAN REVIEW REQUIRED

This document demonstrates Lirena's report design using fictional data. It does not represent a scored CGI-I result, cannot establish a diagnosis, and must not be placed in a clinical record.

CGI-I is not a diagnosis, not a symptom scale, and not an independent outcome if the rater has no baseline.

A report designed for clinical review

Synthetic CGI-I example. The gauges and rows use this instrument's groups and range. They are not a client record.

REVIEW

A clinician who knows the baseline frame rates CGI-I. It should not be emailed to clients as a self-report of improvement.

CONTEXT

CGI-I records the rater's global judgement of change since admission on the seven ECDEU anchors (Guy, 1976). It is a clinician rating, not a diagnosis. The form's 0 = Not assessed is not a rating, so an unassessed item is not recorded.

BOUNDARY

CGI-I is not a diagnosis, not a symptom scale, and not an independent outcome if the rater has no baseline.

REPORT PRINCIPLE

Show the evidence, the version, and the boundary. Leave diagnosis and formulation with the clinician.

CGI-I response pattern

Synthetic responses for CGI-I. The table uses this instrument's groups and range. It is not a client record and does not reproduce official item wording.

ITEM	GROUP	SYNTHETIC RESPONSE
1	Total	**Very much improved**

Synthetic CGI-I values only. Not a client record.

Source-led by design

Lirena separates published methodology, product implementation, and clinical approval. A citation does not by itself authorize administration or prove a software scoring rule.

INSTRUMENT

CGI-I asks how much the person's condition has improved or worsened relative to a baseline. Without a shared baseline and rater convention, the rating is hard to interpret.

ADMINISTRATION

A clinician who knows the baseline frame rates CGI-I. It should not be emailed to clients as a self-report of improvement.

CLINICAL BOUNDARY

CGI-I is not a diagnosis, not a symptom scale, and not an independent outcome if the rater has no baseline.

METHODOLOGY

CGI-I records the rater's global judgement of change since admission on the seven ECDEU anchors (Guy, 1976). It is a clinician rating, not a diagnosis. The form's 0 = Not assessed is not a rating, so an unassessed item is not recorded.
